Recap

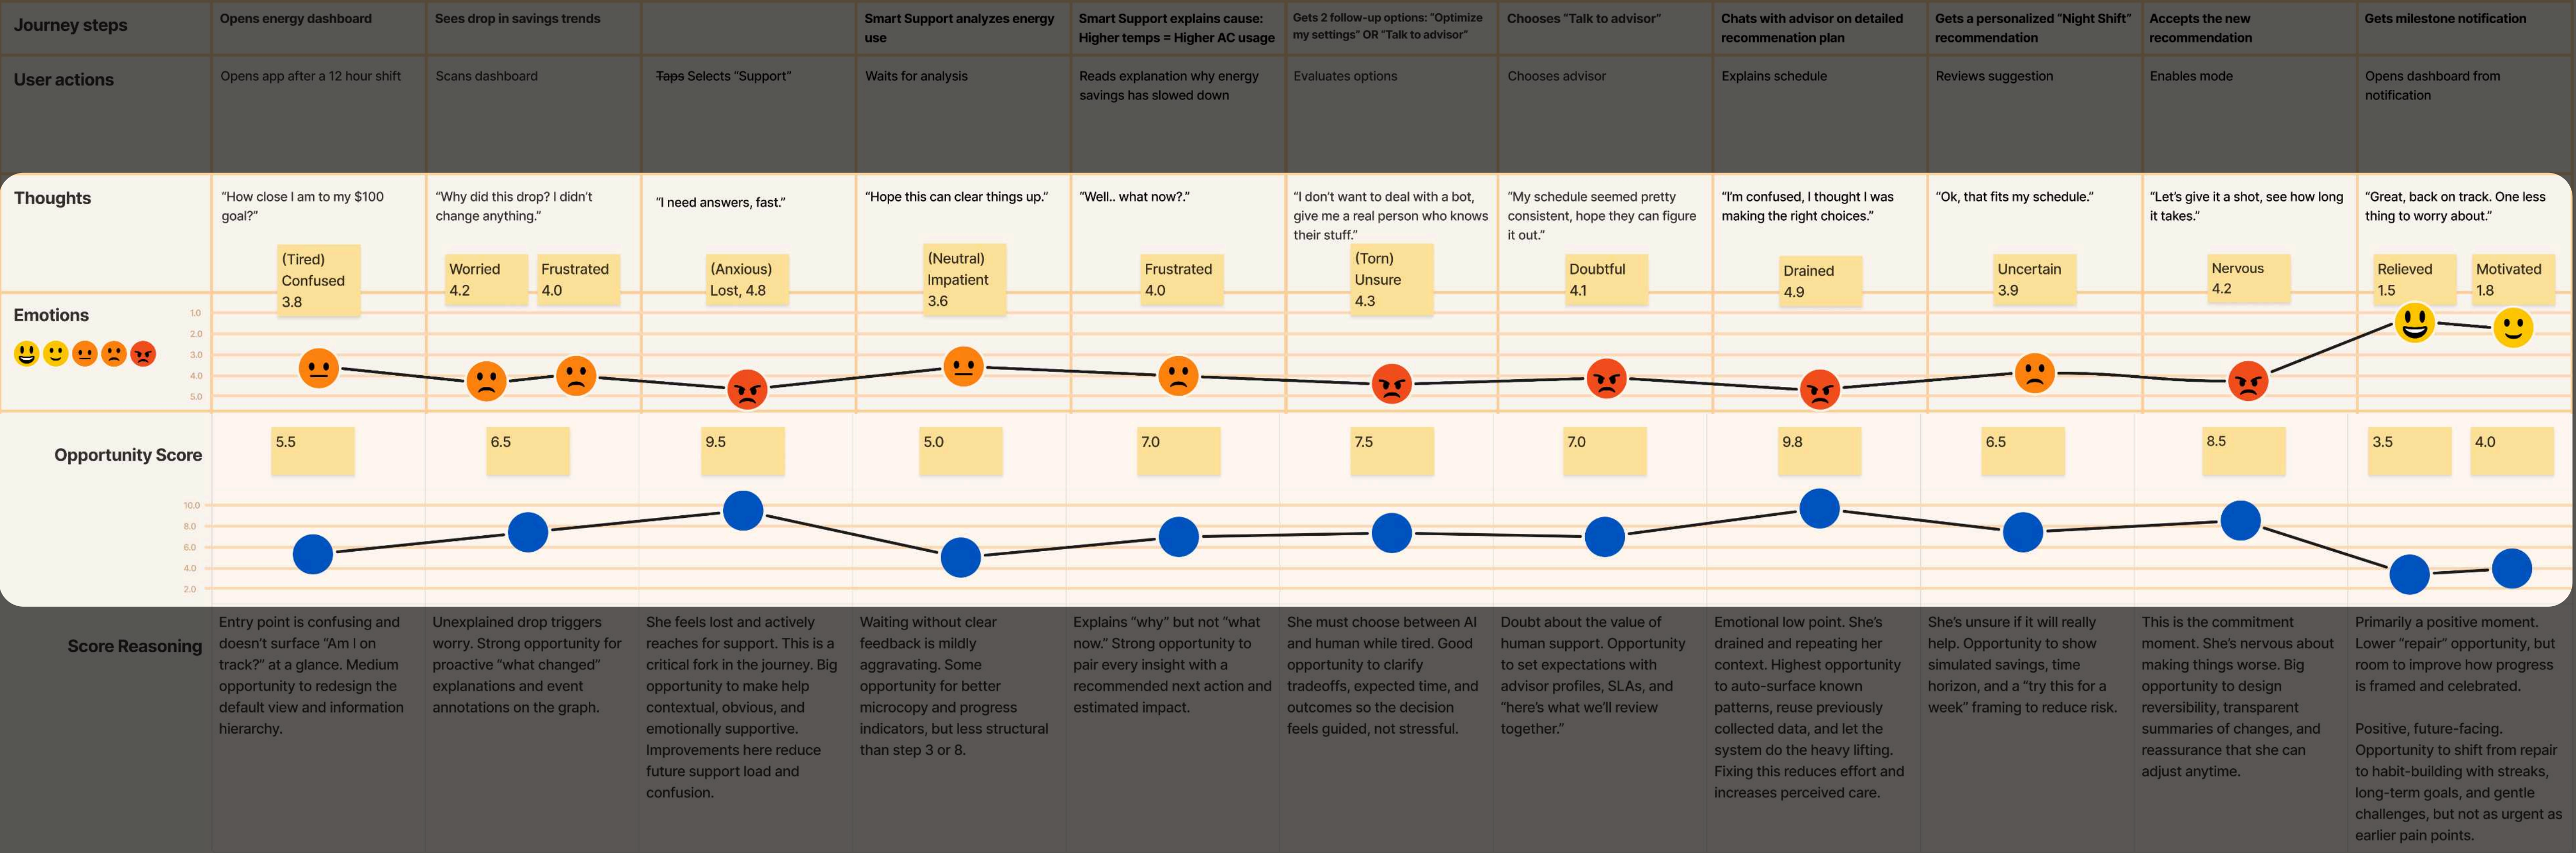

The Redesign

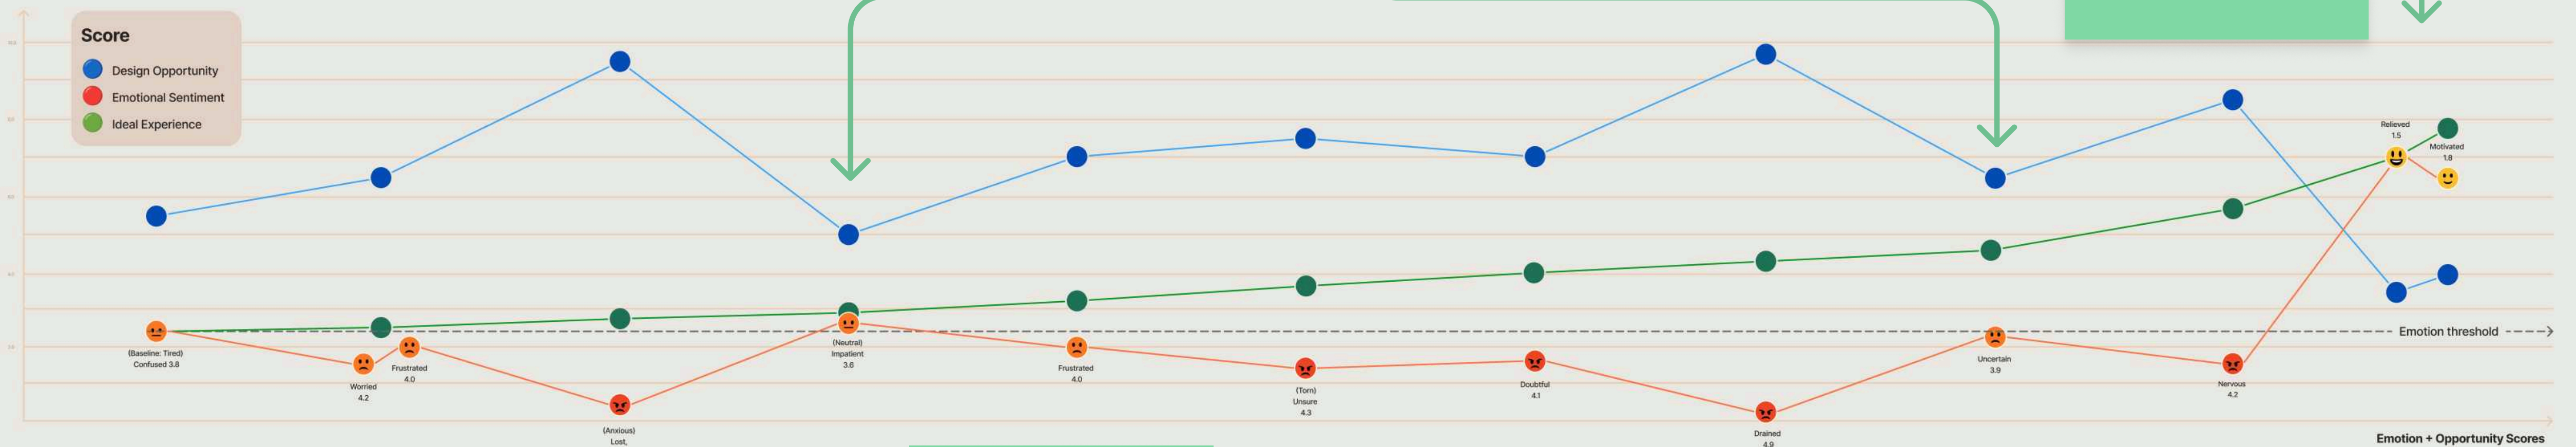

The Breakdown

Turning Emotional Risk into Design ROI

Why the Flow Matters More than Any Screen

Design Implication #2

- Where emotion rebounds Opportunity dips
- Re-prioritize efforts to lowest emotion touchpoints

Design Implication #3

- End with positive “motivated” point
- Opportunity naturally transitions to reinforcement vs creating a pattern of intervention & crisis mode

Design Implication #1

- Where Aisha feels the worst is the highest design opportunity

Aisha's Journey

You check your
energy dashboard

You notice an energy spike

You select "Need help
understanding this?"
feature

You open Smart Energy
Support Assistant

You receive a personal
automated insight

You choose "Talk to Energy
Support Advisor"

You connect with your
energy support advisor,
Maya.

You get a personalized
"Night Shift" mode
recommendation.

You enable
"Night Shift" mode

You receive your Weekly
Energy Savings Summary

Line of Interaction

Dashboard shows current
usage and savings progress

High energy usage is
highlighted visually

CTA opens to contextual
help: The Smart Energy
Support Assistant

The Smart Energy Assistant
explains the potential cause
& gives you 2 options

Option 1: An automated
solution or Option 2: Talk to
Energy Support Advisor

A message shows your place in
line, estimated wait time & a
notification option for your turn

Maya responds and
guides your next steps

Recommendation appears
with explanation of savings

Confirmation shows
schedule update across
your devices

Weekly Energy Savings
Summary arrives through
email, app or notification

Line of Visibility

System retrieves real-time
energy usage data

Data pipeline compares
usage to baselines to
detect anomalies

Context metadata loaded for
Smart Energy Assistant

Smart Assistant engine pulls
history & device logs

ML models determine
automated vs human
support

Routing system assigns
the case to Maya &
loads the profile

Maya uses internal
dashboard to analyze
the profile's usage history

Rule-based logic engine
creates a personalized
savings plan

System pushes updated
settings to all connected
devices

Machine-Learning pipeline
aggregates weekly usage &
creates automated summary

Line of Internal Interaction

Data servers sync with
internal energy dashboard

Customer tracking software
displays logs user behavior

Knowledge repository
loads customer
interaction scripts

Data Science team
updates prediction models

Customer tracking
software logs automated
insight engagement

Customer support platform
integrates energy history

Internal dashboard tooling
& data visualization teams
on standby to support Maya

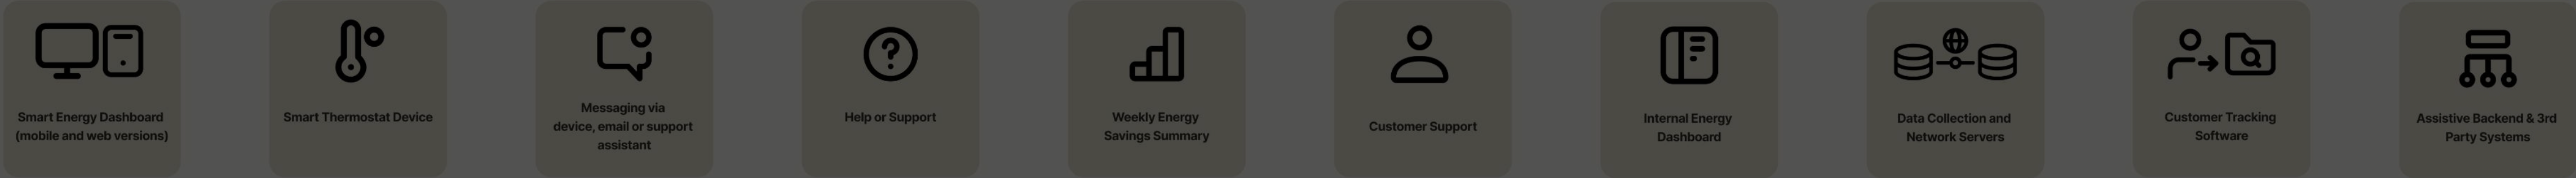

Content/design teams
update recommendation
language

APIs send updates to
utility partners and
3rd party systems

Design/content teams refine
summary messaging, visual
layout & success tracking

AI Recommendations

5 pending

Sort

#1

Energy savings milestone: Celebrate achievement

95%

Positive Signal

User achieved 15% energy reduction this month—opportunity for positive reinforcement.

Approve & Send

#2

Override pattern emerging: Offer schedule assistance

92%

Override Spike

High Engagement

User has overridden automated settings 8 times this week, suggesting schedule misalignment.

Approve & Send

#3

Confusion spike detected: Send clarity message

87%

Emotional Dip

Low ML Confidence

User Aisha showed signs of uncertainty after adjusting temperature settings 3 times in 10 minutes.

Approve & Send

#4

Night mode suggestion based on behavior

84%

ML Insight

User frequently adjusts temperature between 10PM-6AM. Night mode could automate this.

Approve & Send

#5

Engagement drop: Re-engage with tips

78%

Emotional Dip

Low Activity

Dashboard visits decreased by 40% over 2 weeks. Consider re-engagement message.

Approve & Send

- Message draft composer

Maya's main focus

This is where Maya should spend most of her cognitive energy:

- Problem-solving tasks that can't be automated & will provide the most value for Aisha
- Maya doesn't need more data. She wants a signal to tell her "it's go time" so she can act confidently and quickly.
- Goal: Accelerate vs. a thousand micro-paper cuts to streamline her process

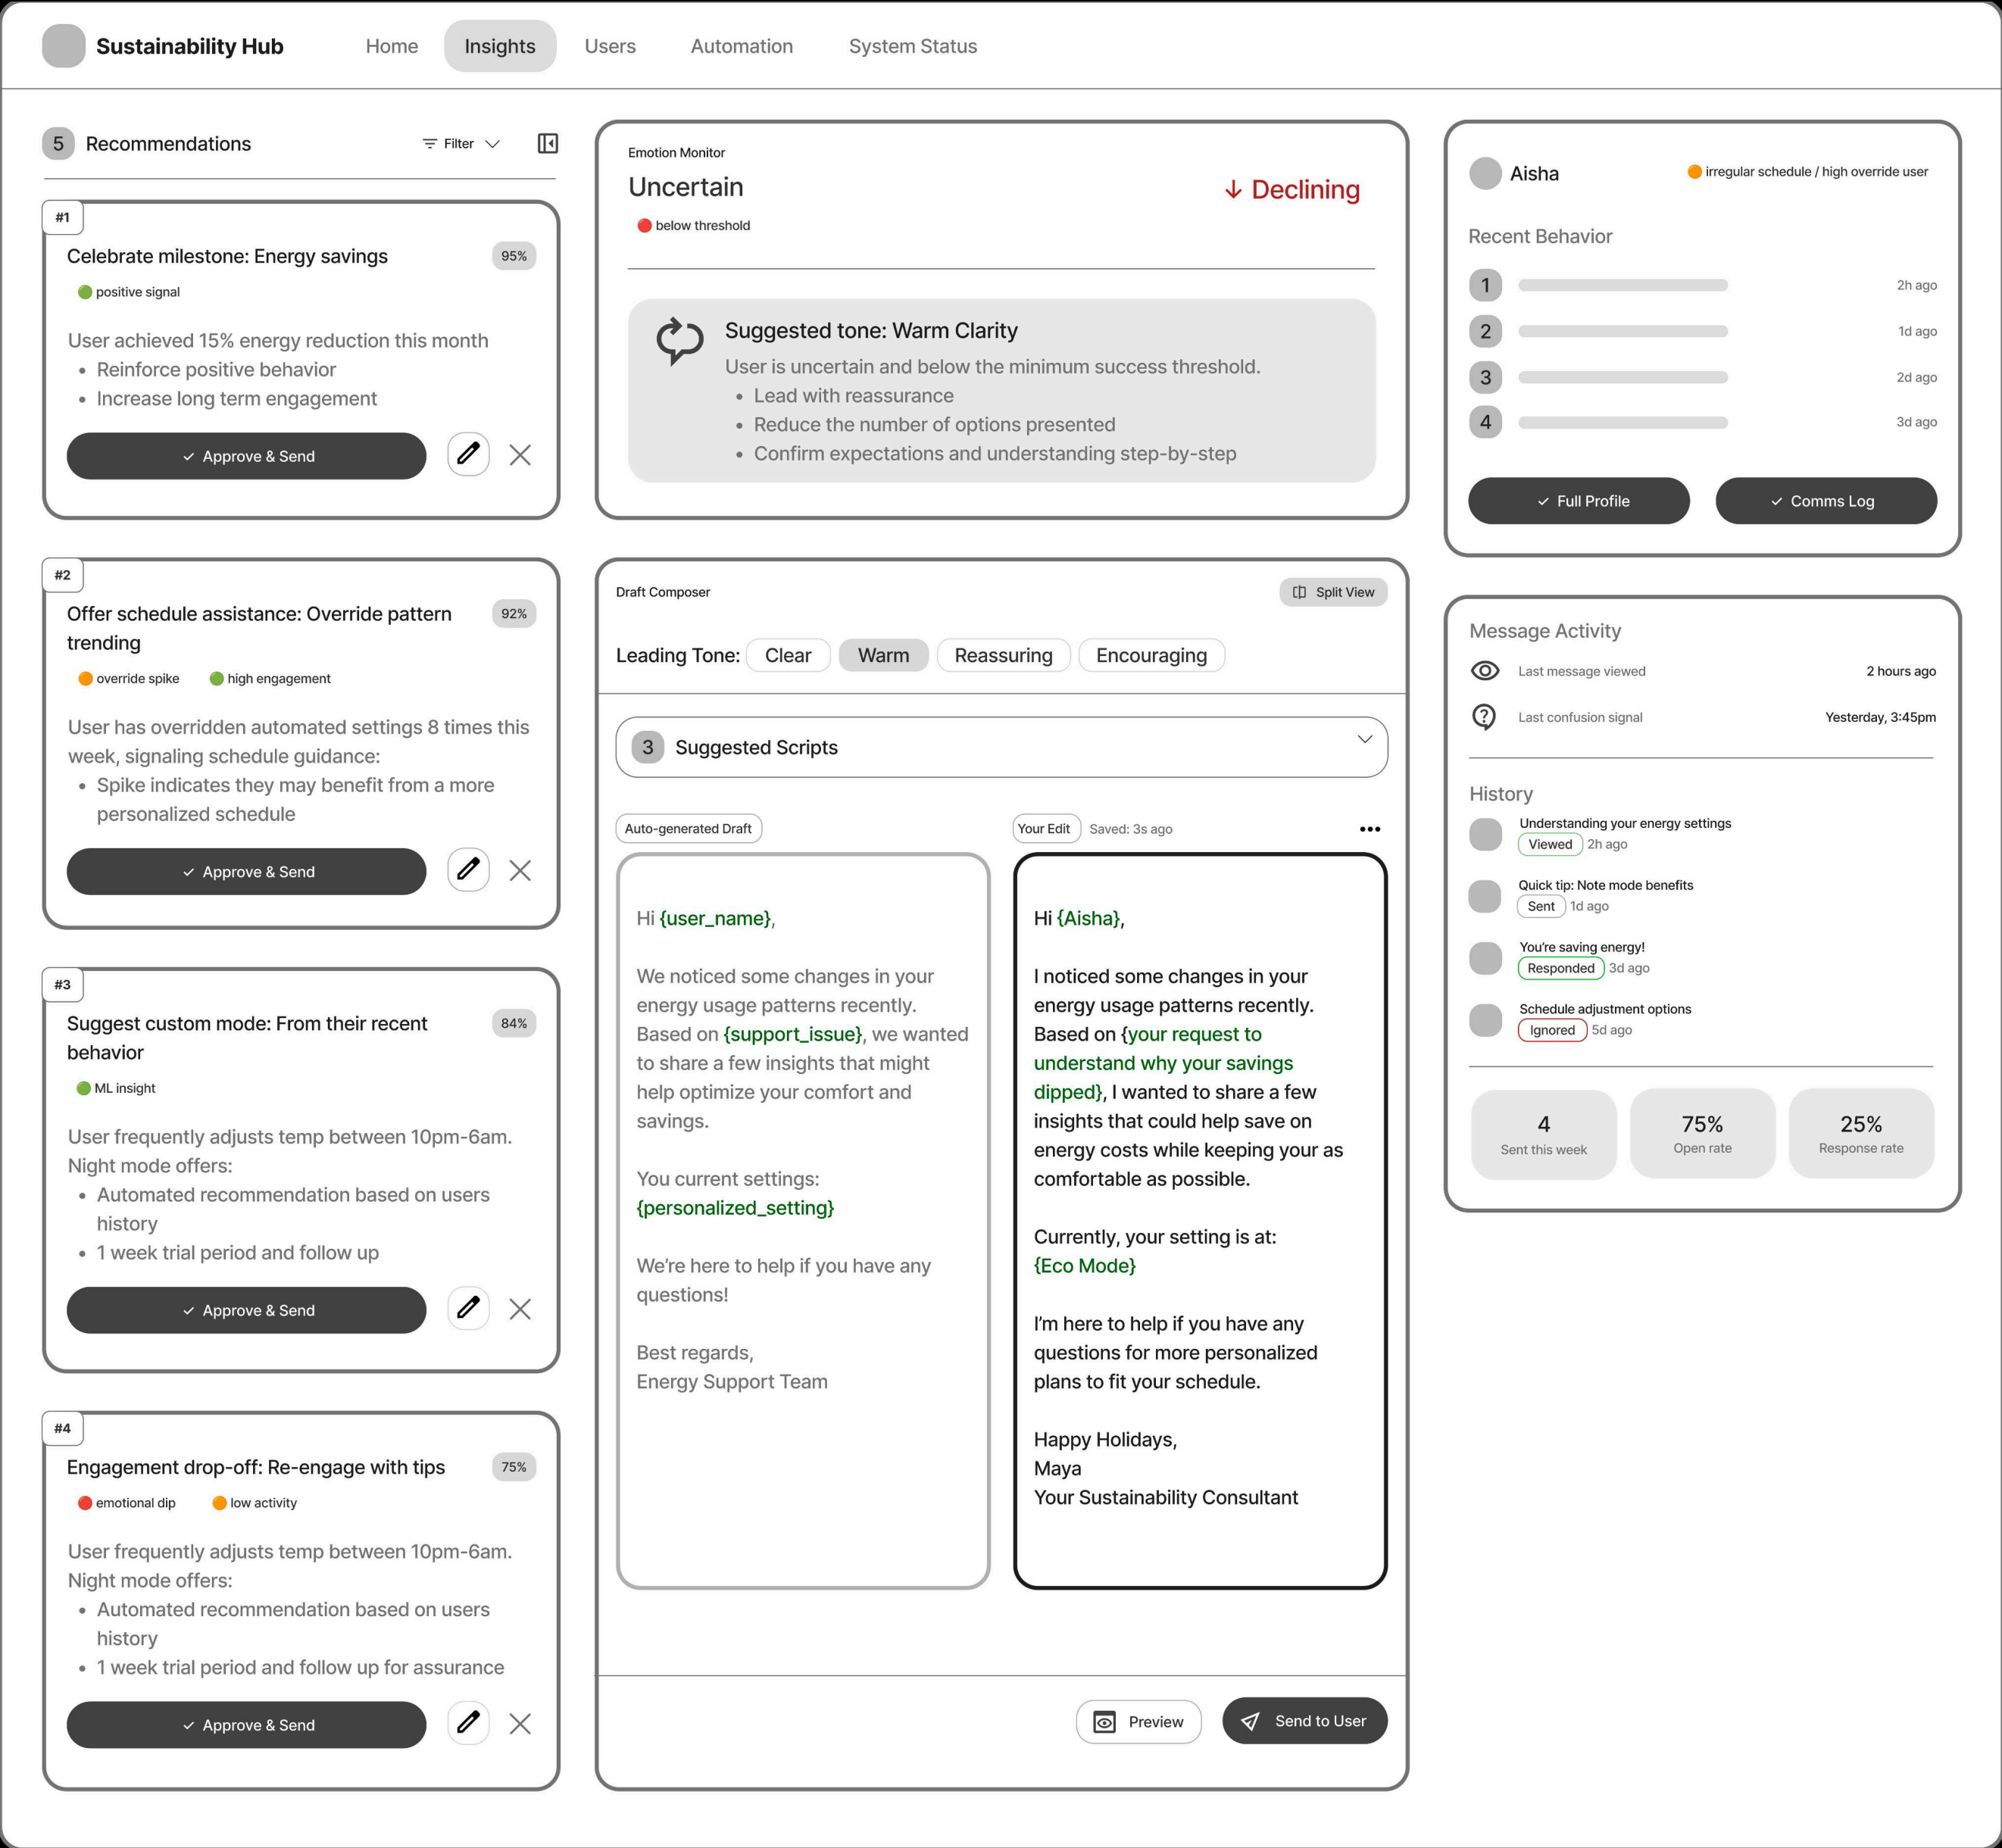

Glanceable insights

- What are they feeling?
- What tone/emotion do they need to be guided towards for a successful threshold for this flow?

Glanceable insights: Emotion Monitor

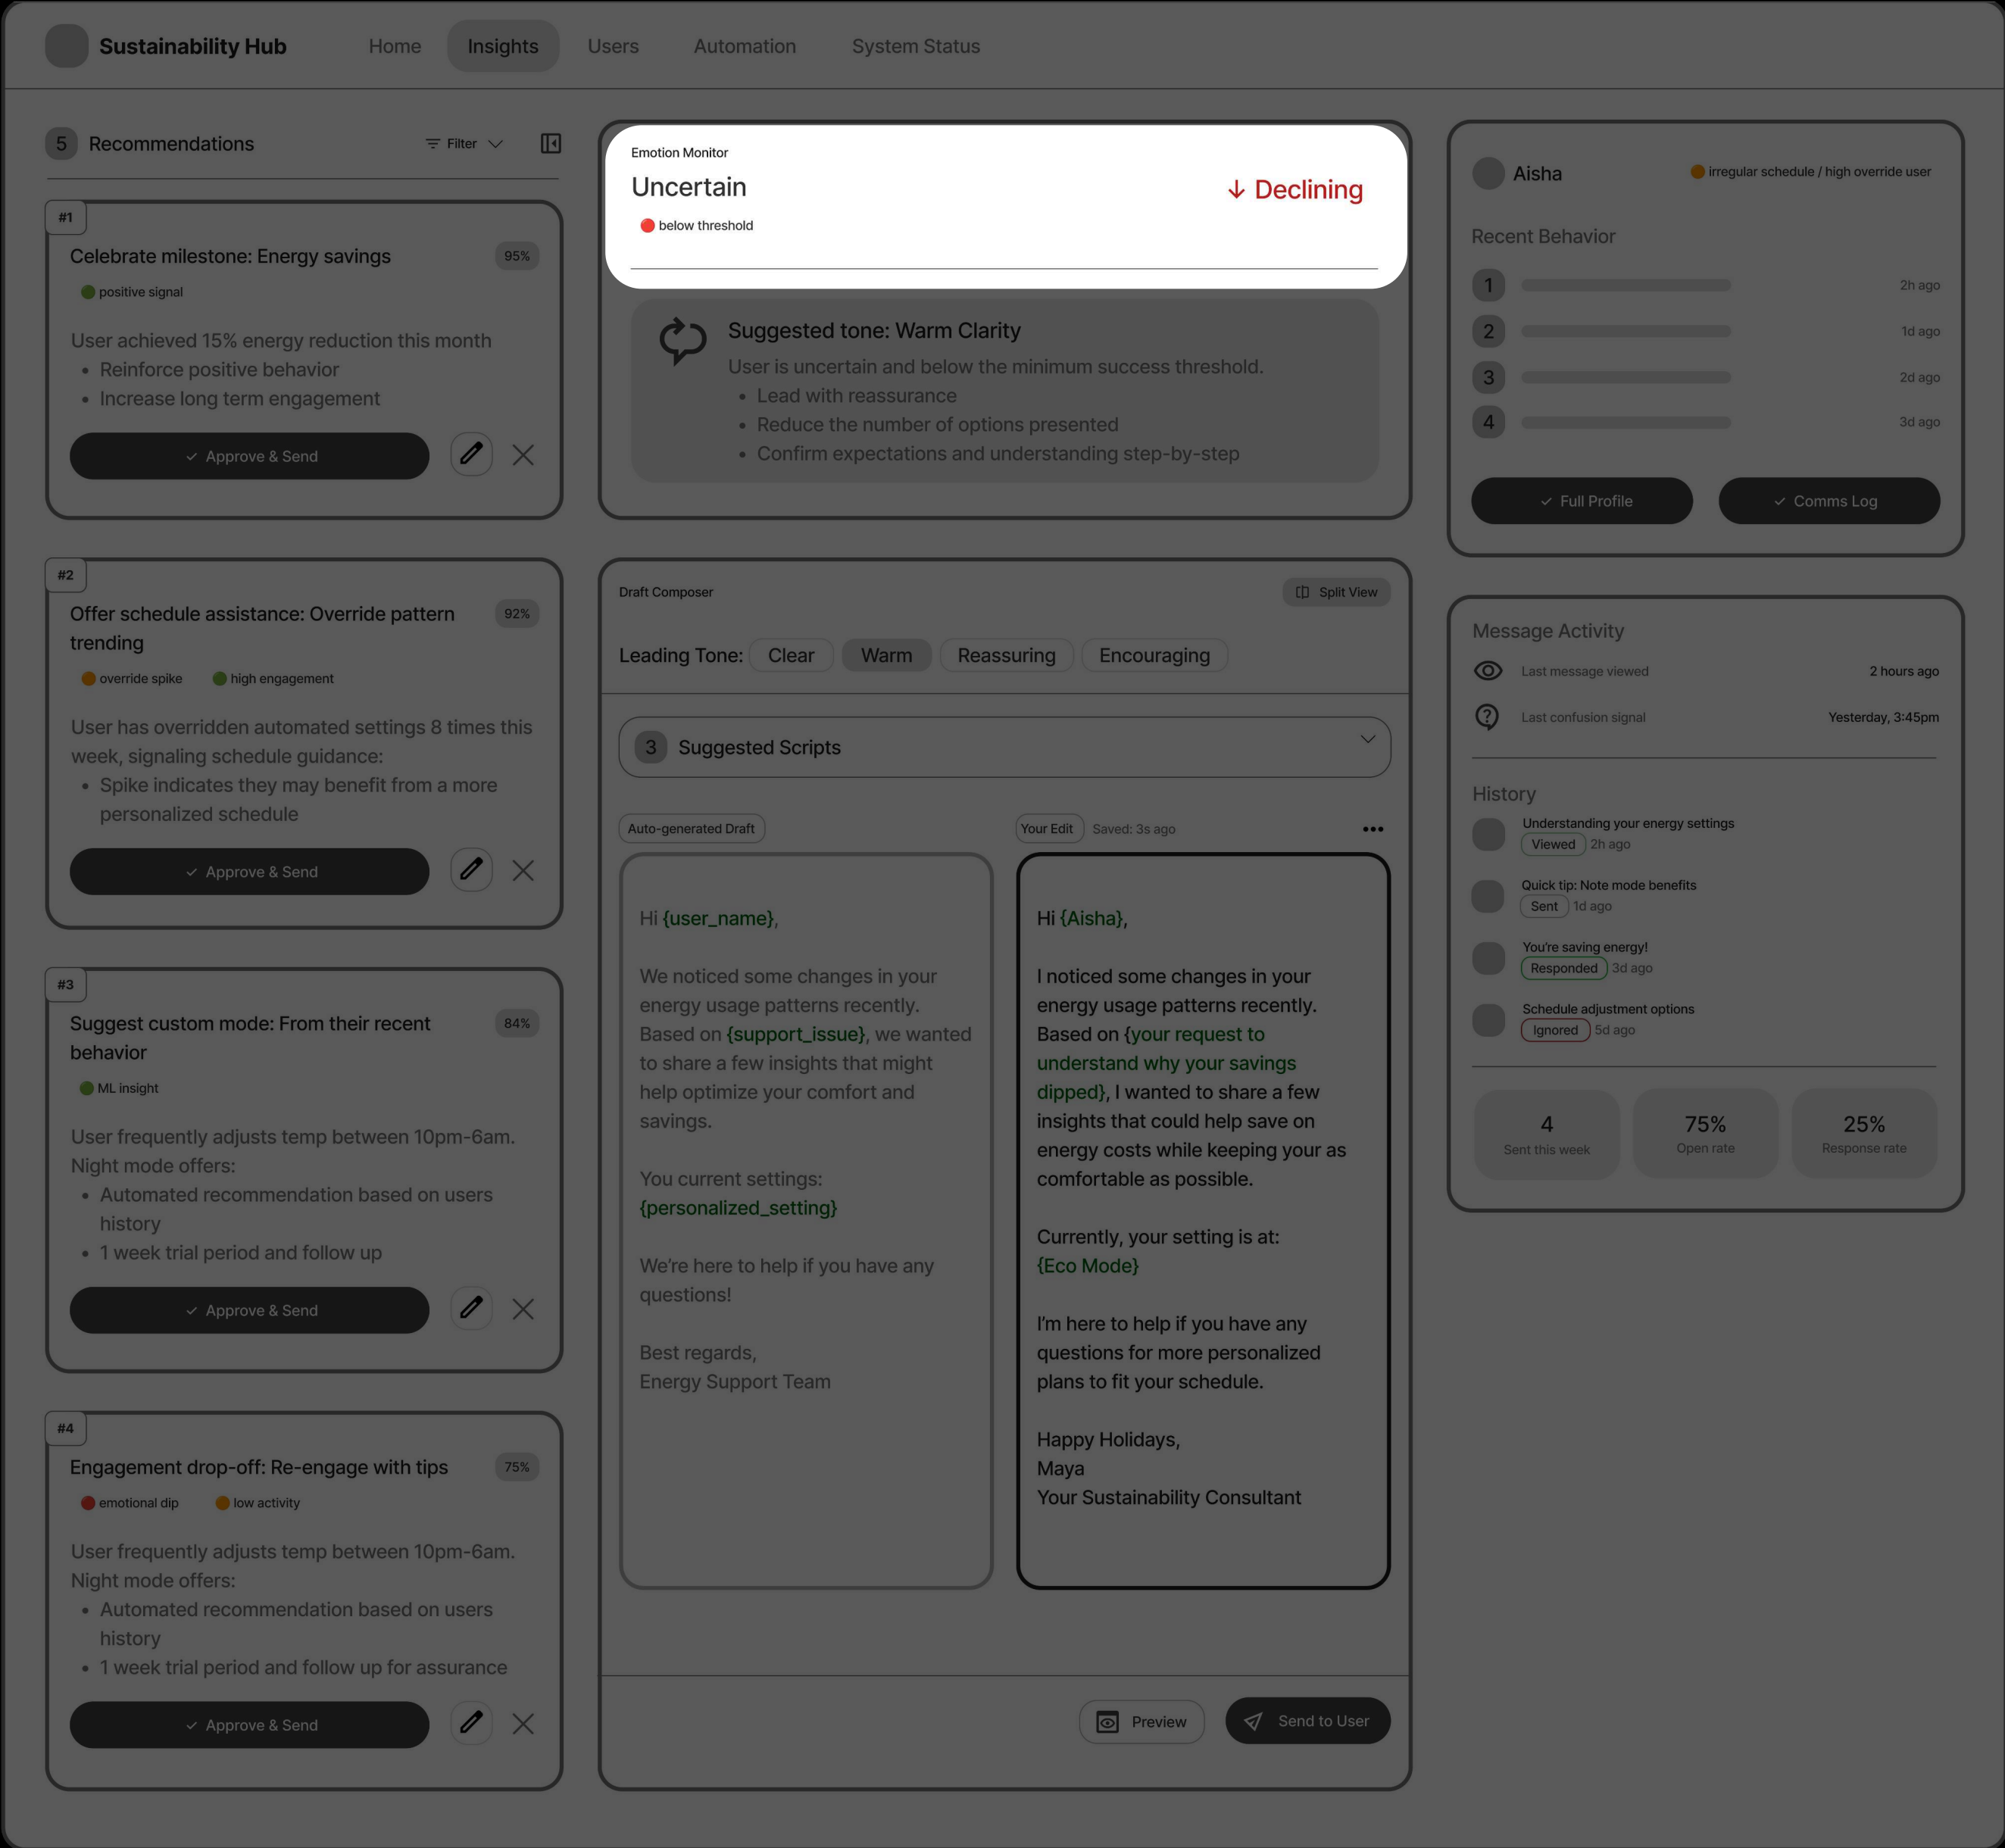

- should be the primary decision layer of this page, not a side widget or "nice-to-have"

Designing for Confident Action

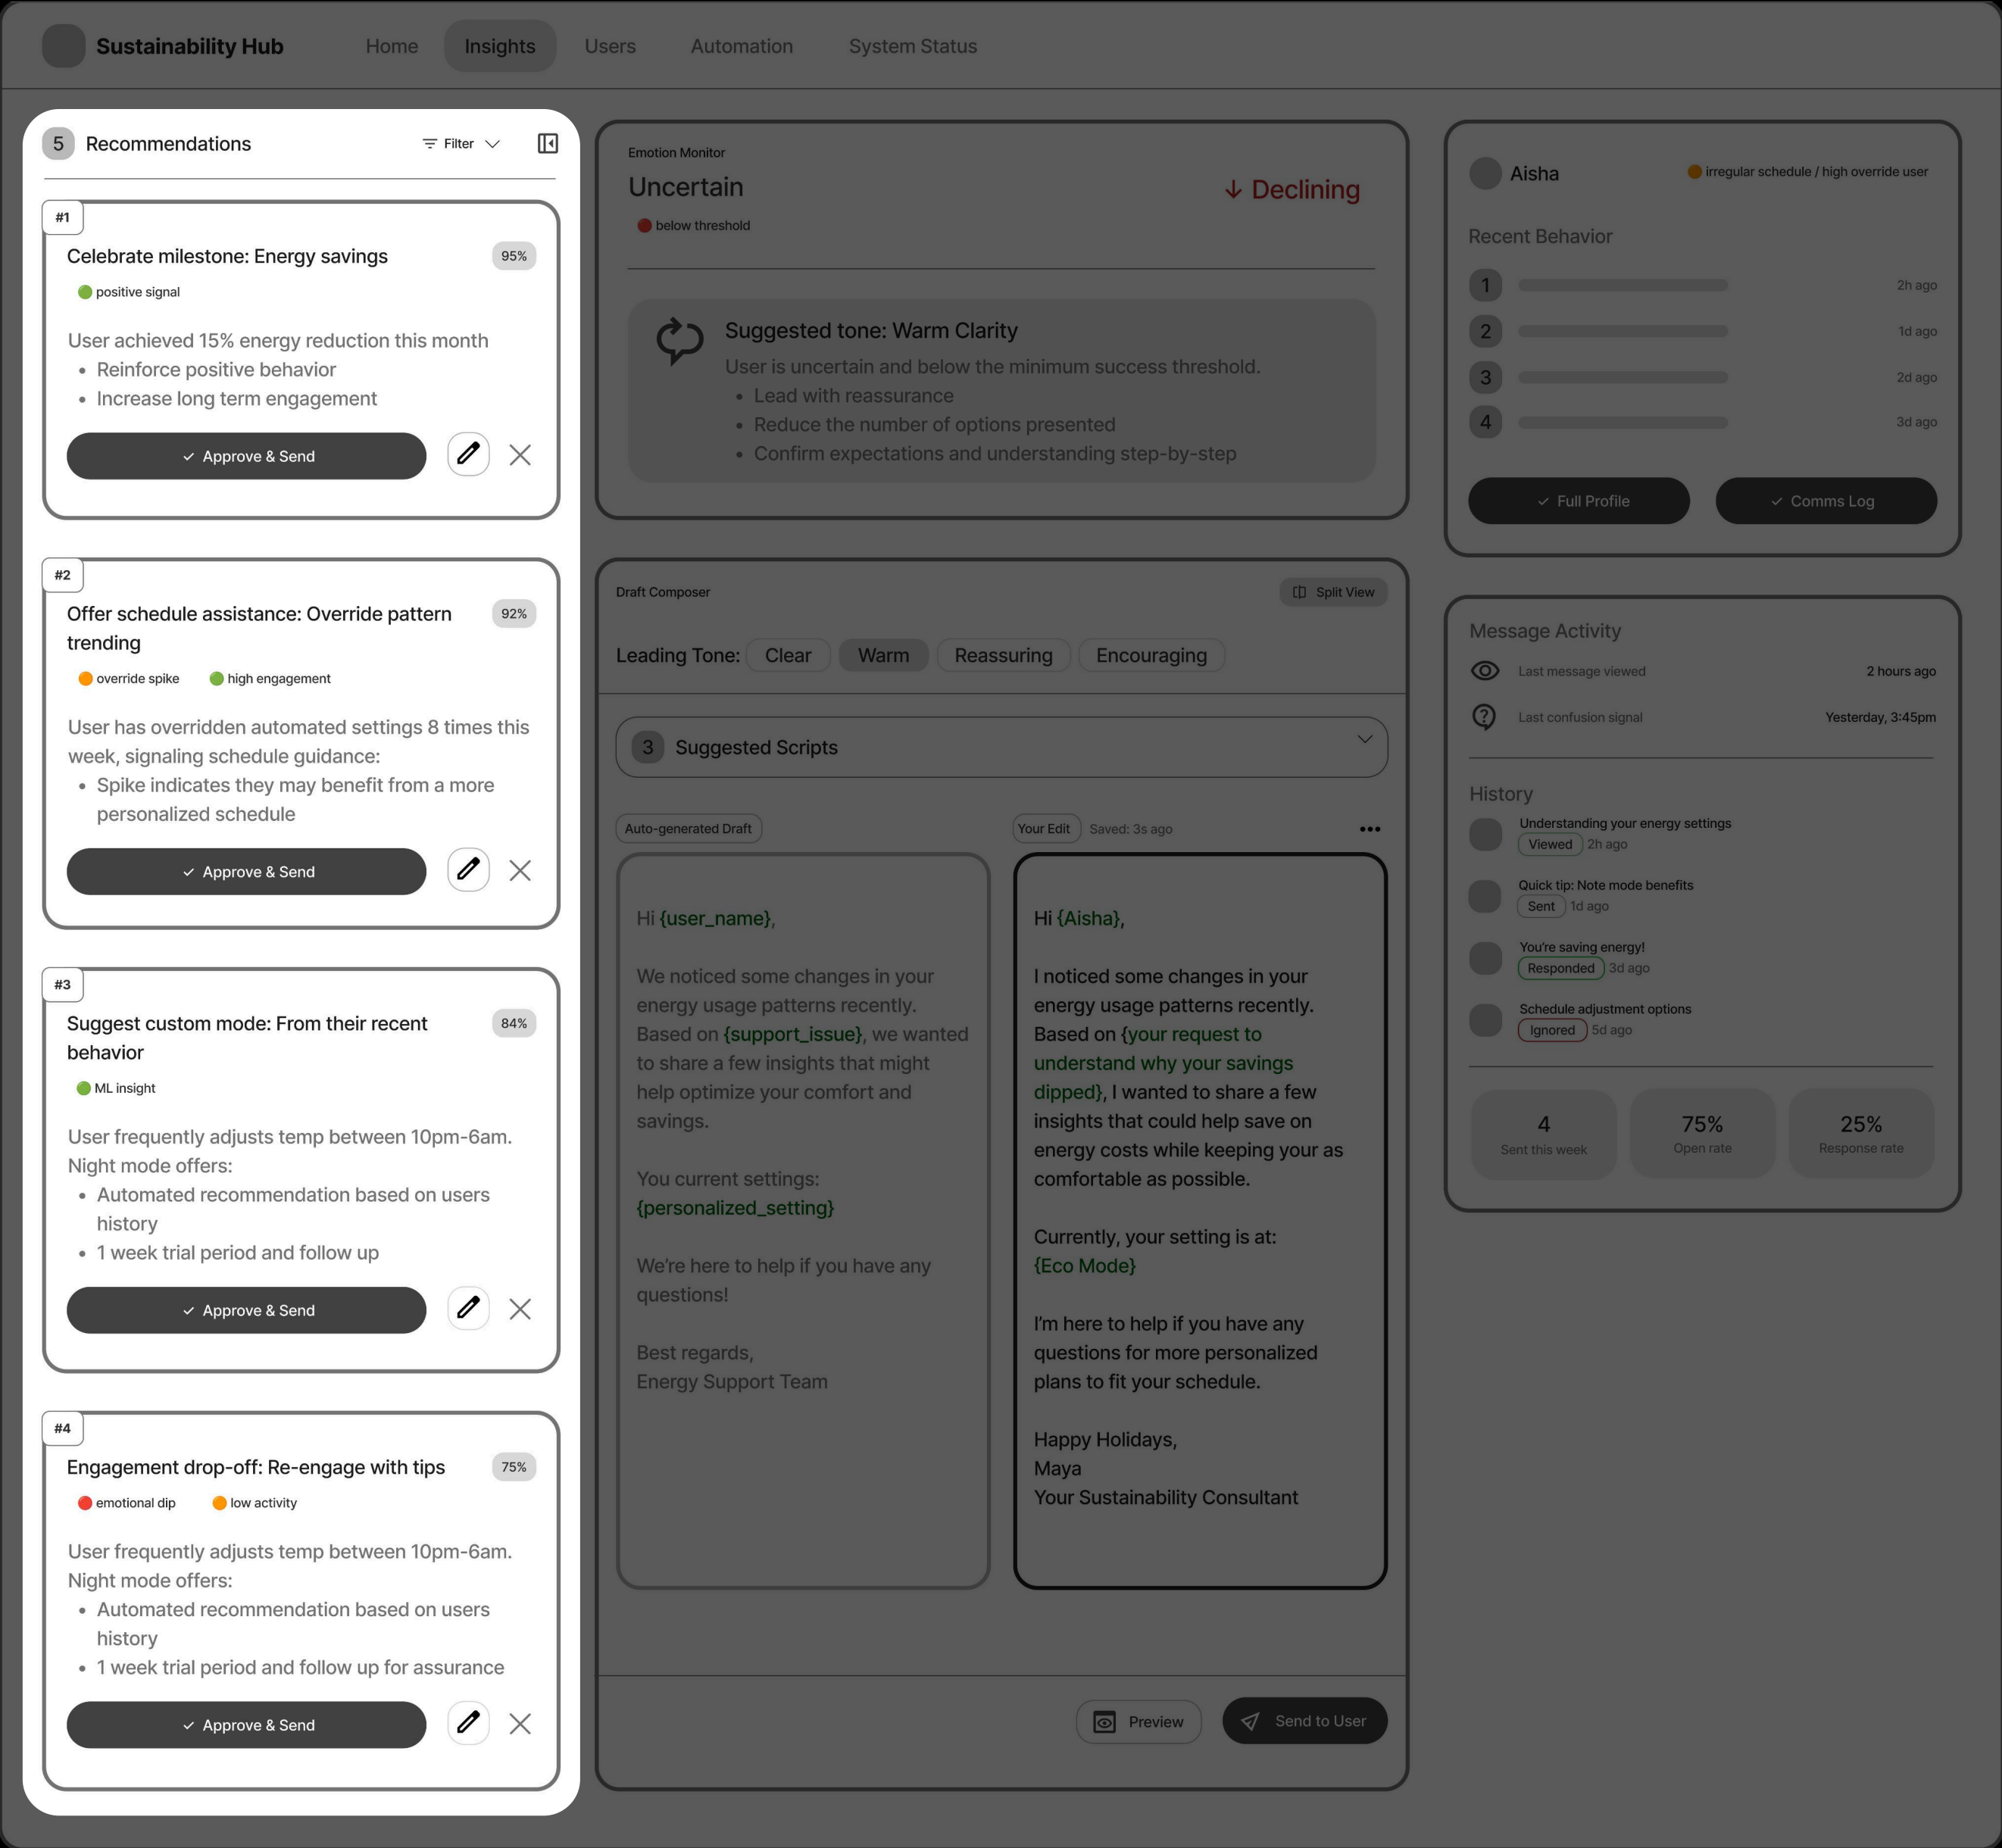

Designing for Confident Action

- Prioritized moments of emotional risk

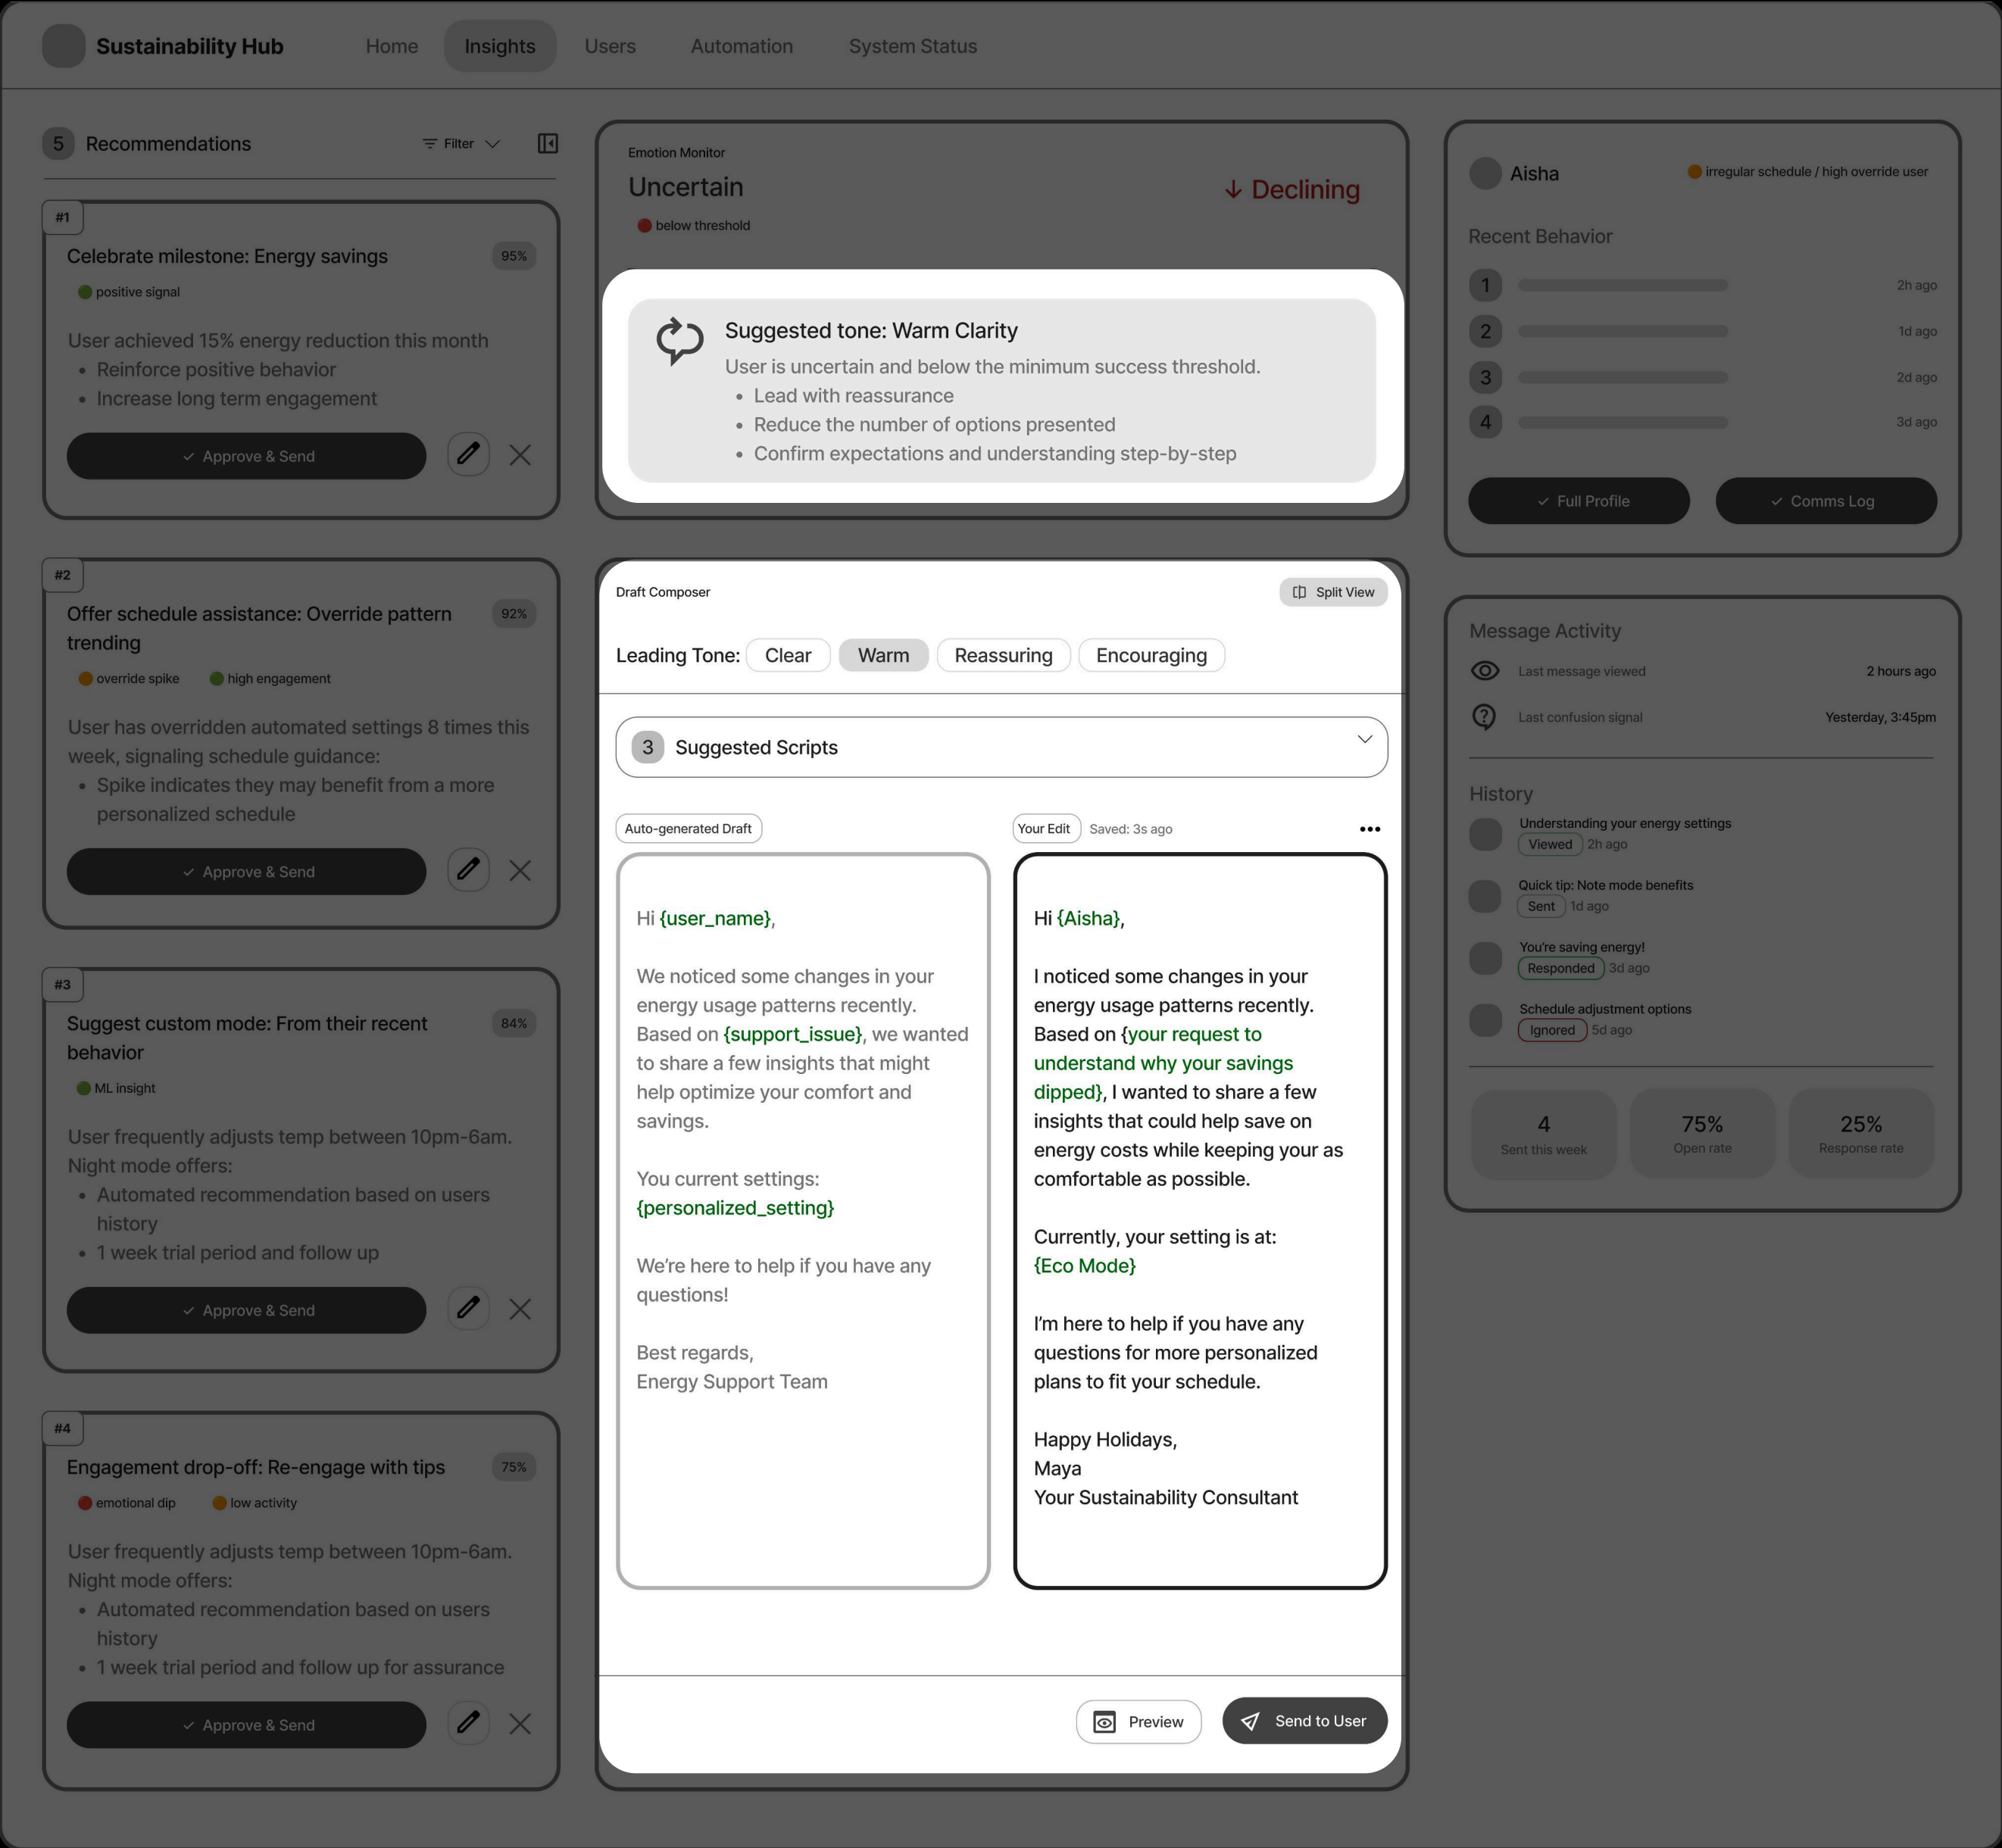

Designing for Confident Action

- Tasks stack–ranked to priority and confidence score

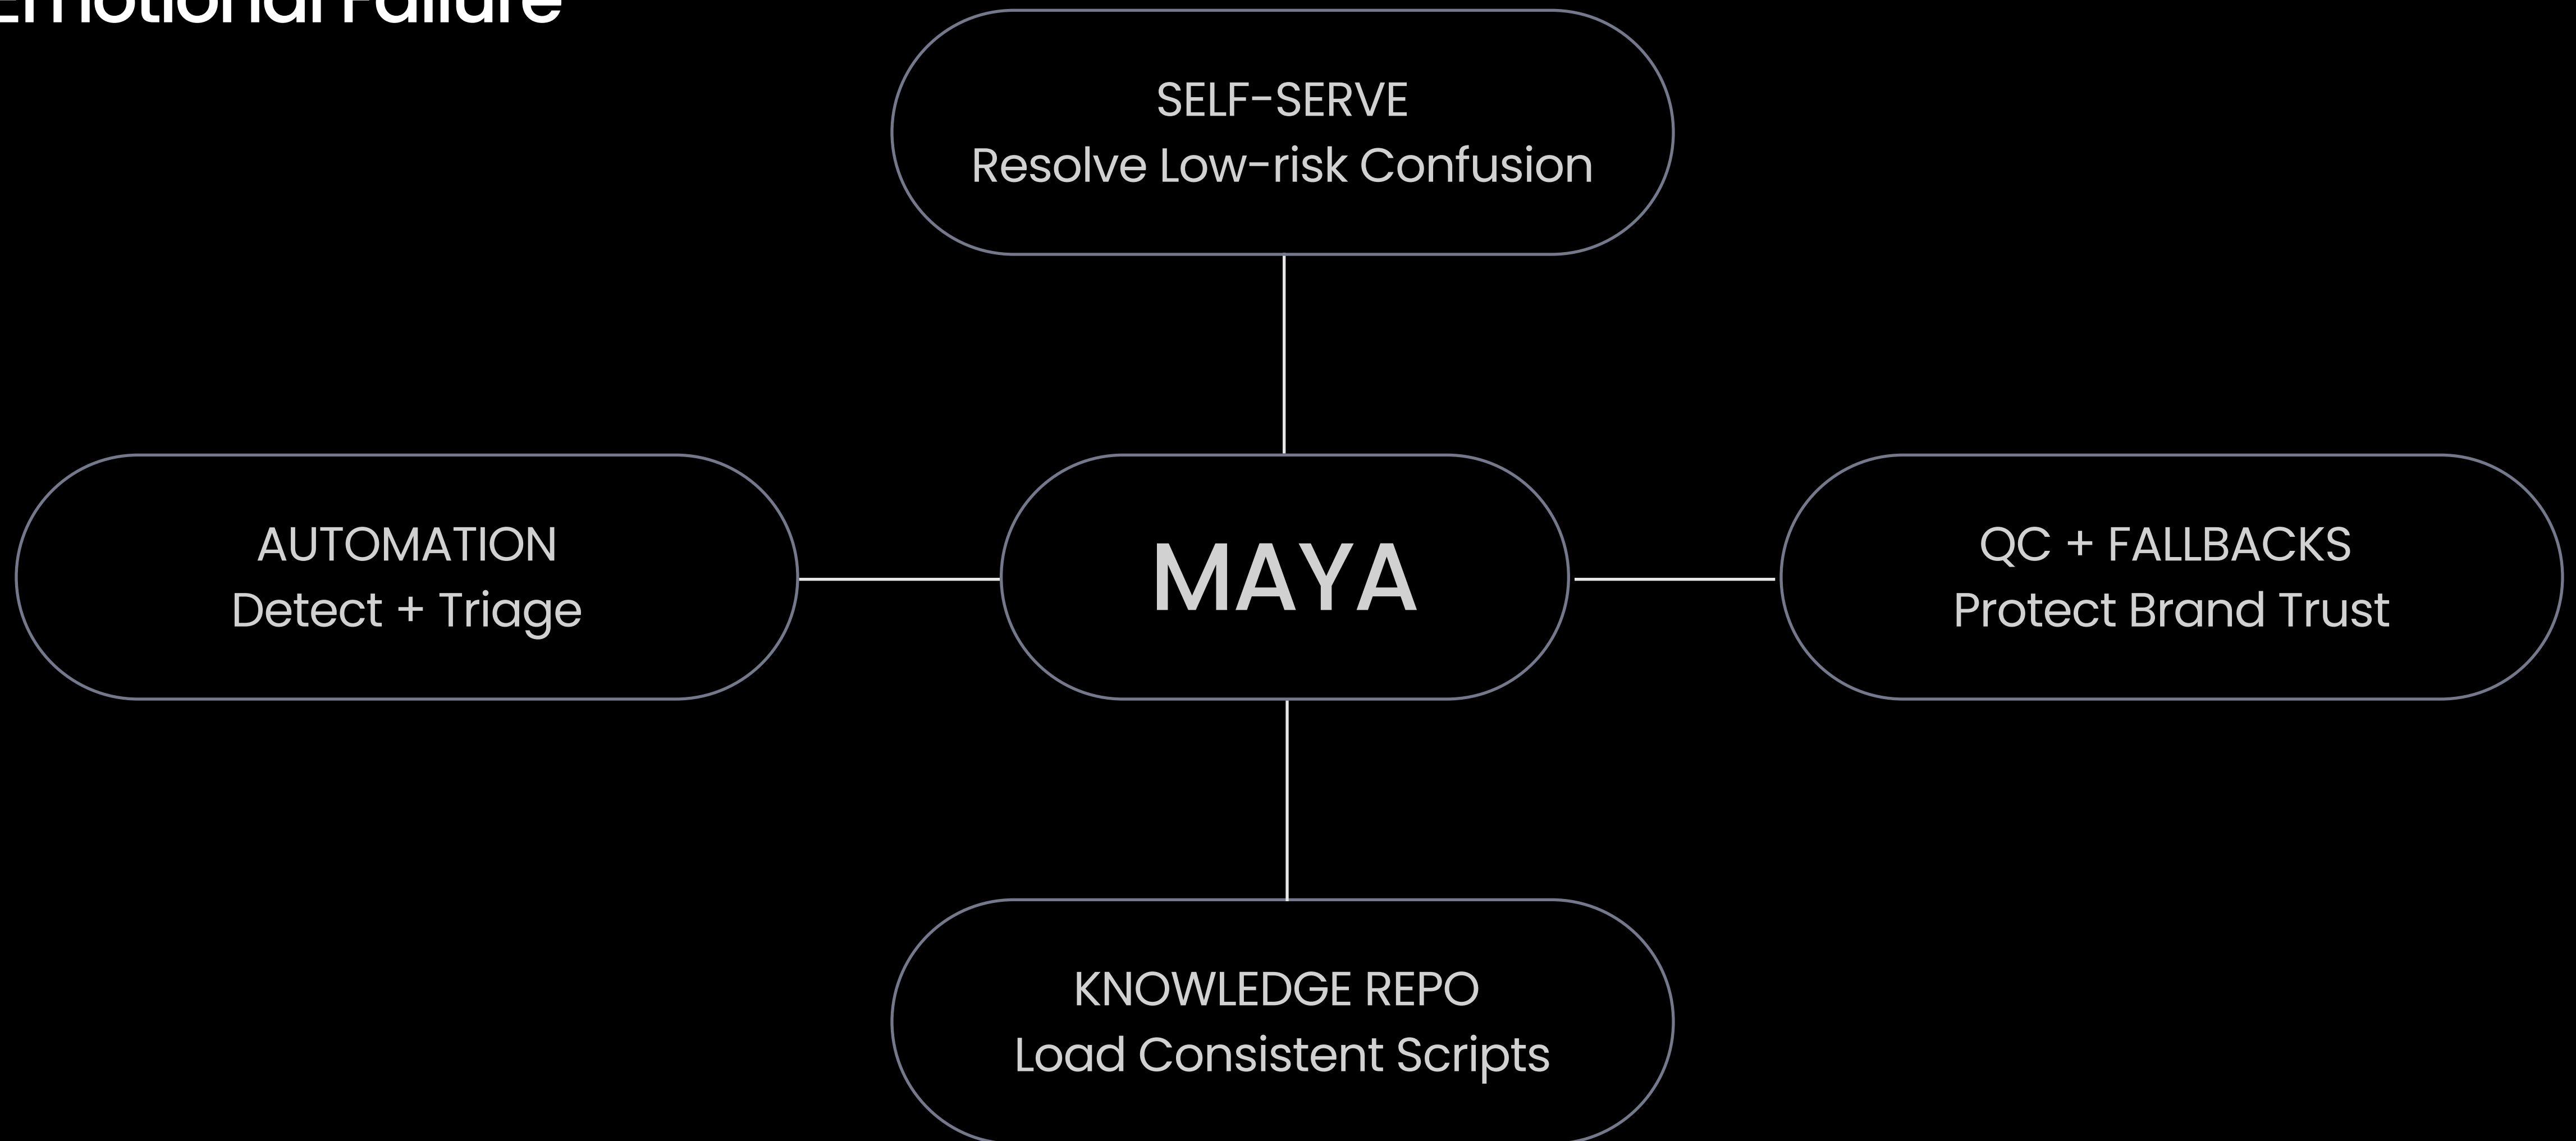

Designing for Confident Action

- Centralized support guidance for emotional state of the customer

Avoiding the Single Point of Emotional Failure

What this Can Unlock Across Teams

Design Teams

- Prioritize moments of emotional risk
- Design systems that support confidence, not just insight

Product and Engineering

- Align emotional signals with KPIs and thresholds
- Build safer, more stable pathways for information architecture and backend infrastructure

Across the Organization

- Reduce UX debt earlier in the lifecycle
- Scale support without increasing cognitive burden for customers, internal teams & external partners

Thank you
