

NEST

THERMOSTAT

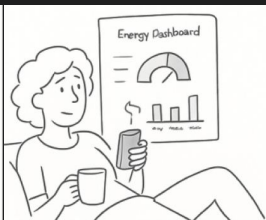

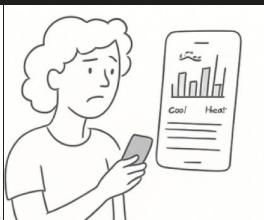

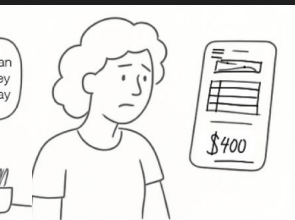

DASHBOARD REDESIGN

Energy dashboards. They measure what you use, but don't help you make smarter choices about costs & savings.

It's time for the dashboard to work as hard as the thermostat.

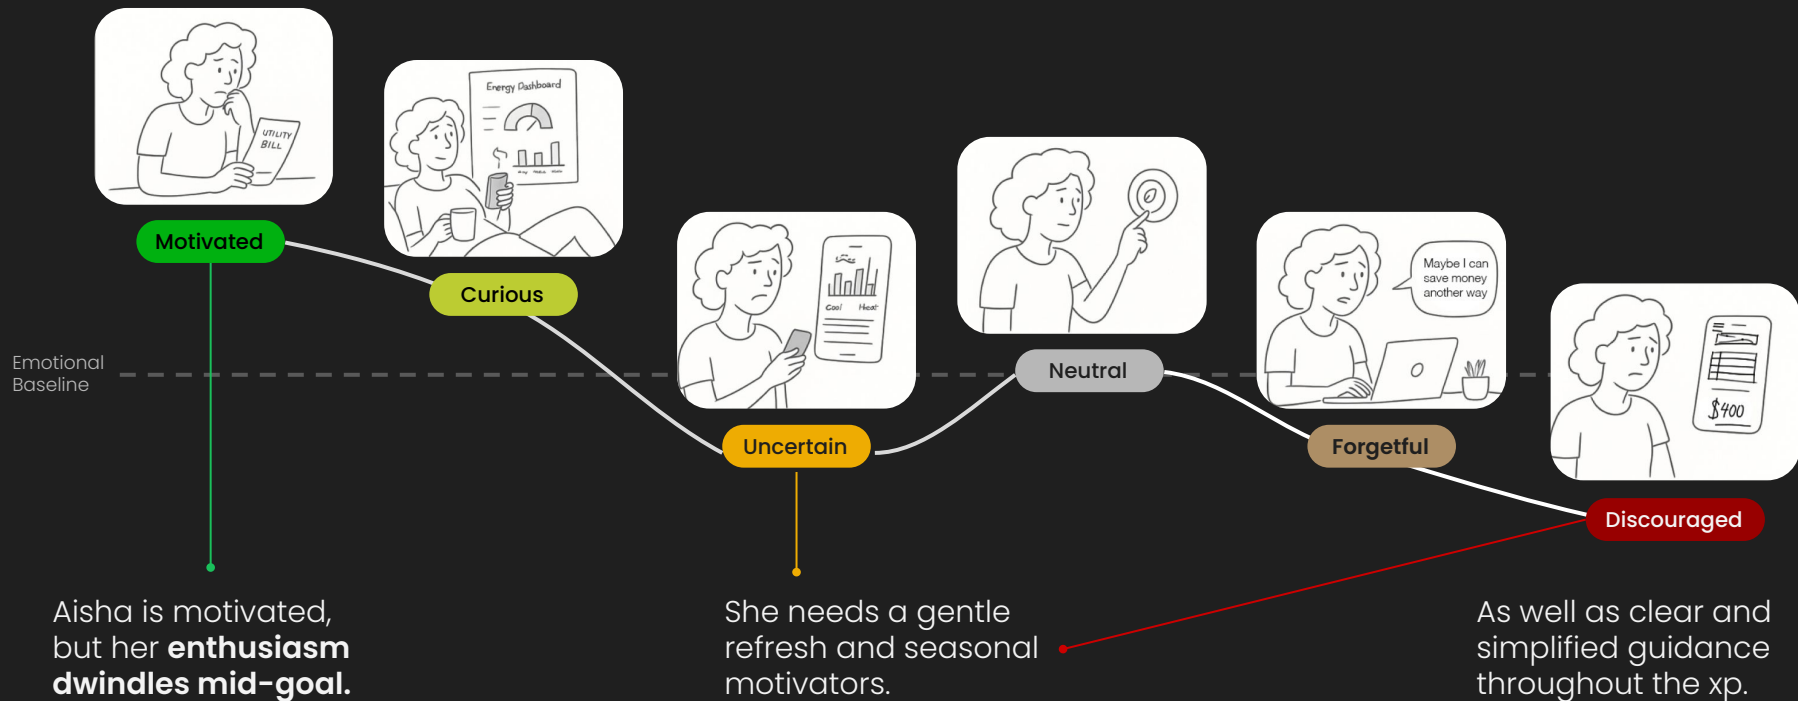

AISHA: A DAY IN THE LIFE

THE CURRENT EXPERIENCE

					
TRIGGER	CHECK - IN	UNDERWHELM	TRIAL / ERROR	FORGETFUL XP	REFLECTION
"Gotta see if I can save up for my trip."	"Let's see if I'm using too much AC."	"Ok, but... now what? Am I doing well or can I do better?"	"I'll change it to 73 and hope it helps."	"Maybe I can save money another way.."	"I guess it didn't make a difference."

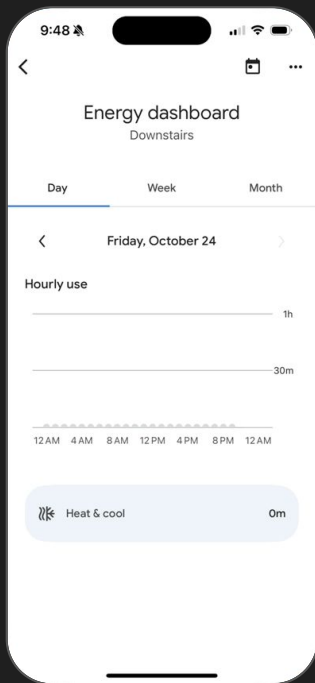

IDENTIFYING KEY TOUCHPOINTS

EMOTIONAL TIMELINE

ANALYSIS + DESIGN OPPORTUNITIES

HEURISTIC PRINCIPLES

Automate unwanted workload	Eliminate mental calculations, comparisons, and other repetitive tasks. The app should provide a ready-to-use interface for the user to use the data.	Instead of requiring users to perform calculations, the app should provide a ready-to-use interface for the user to use the data.	Minor issues	"Your mode" clearly indicated an energy-saving mode, but that the user has to wait for it to be activated. The app should provide a ready-to-use interface for the user to use the data.	Surface trends, insights, and context advice can be used to understand current usage and save costs. The app should provide a ready-to-use interface for the user to use the data.
Reduce uncertainty	Clarify data in a manner that is clear and concise to reduce the user's uncertainty.	A delivery app shows an estimated delivery time, but the user is unsure if it is accurate. The app should provide a ready-to-use interface for the user to use the data.	Minor issues	Leaf icon appears clear, but the user is unsure if it is accurate. The app should provide a ready-to-use interface for the user to use the data.	When the leaf icon shows in the "Energy dashboard" section, the user is unsure if it is accurate. The app should provide a ready-to-use interface for the user to use the data.
Fuse data	Bring together data from multiple sources to provide a comprehensive view of the user's energy usage.	A financial dashboard shows data from multiple sources, but the user is unsure if it is accurate. The app should provide a ready-to-use interface for the user to use the data.	Severe issues	"Energy dashboard" is a good name for the app, but the user is unsure if it is accurate. The app should provide a ready-to-use interface for the user to use the data.	Helps to show contextual aggregate of data to inform and provide decision-making. - Energy usage over meaningful timelines and categories. - Context of related trends. - Patterns, best practices based on neighborhood data. - Links to related dashboard pages for more information.
Present new information with meaningful adds to interpretation	The information should be presented in a way that is meaningful to the user.	Instead of showing new information, the app should provide a ready-to-use interface for the user to use the data.	Minor issues	Leaf icon for "Your mode" is a good name for the app, but the user is unsure if it is accurate. The app should provide a ready-to-use interface for the user to use the data.	Can combine leaf icon with other savings insight, depending on the leaf icon.
Use names that are conceptually related to function	Display names and labels should be clear and concise to reduce the user's uncertainty.	A financial dashboard shows data from multiple sources, but the user is unsure if it is accurate. The app should provide a ready-to-use interface for the user to use the data.	Usability	"Your mode" clearly indicates an energy-saving mode, but that the user has to wait for it to be activated. The app should provide a ready-to-use interface for the user to use the data.	A tag is not clear that the "Your mode" is not used for the purpose of all a single leaf icon effect.
Group data in consistently meaningful ways	Within a screen, data should be grouped in a way that is meaningful to the user.	In a period of each screen, all data should be grouped in a way that is meaningful to the user.	Usability	Schedules and Energy dashboard pages are grouped in a logical way.	Surface usage insights and suggest recommendations. Example: - Adjust the "leaf" schedule to be more efficient. - Single action items during peak usage times.
Limit data-driven tasks	Use color and graphics to reduce the user's uncertainty.	A financial dashboard shows data from multiple sources, but the user is unsure if it is accurate. The app should provide a ready-to-use interface for the user to use the data.	Minor issues	Thermalize temperature and different modes effectively. "Energy dashboard" shows usage over time but doesn't provide relevant patterns to guide actions or recommendations.	Clearly highlight trends and patterns over meaningful timeframes. - Can use leaf icon to indicate energy usage is high. - Can use leaf icon to indicate energy usage is low.
Include in the displays only that information needed by the user at a given time	Only display information that is relevant to the user at a given time.	When performing a task, the app should provide a ready-to-use interface for the user to use the data.	Usability	Thermalize data is a great job of reflecting internal info to focus on leaf icon. "Energy dashboard" data is easy to read, but the user is unsure if it is accurate. The app should provide a ready-to-use interface for the user to use the data.	Add aggregated data with icons to represent trends and show recommendations. The user can control the data to help them to help make the most meaningful decisions when making energy-saving decisions.
Provide multiple coding of data when appropriate	The system should provide data in a way that is meaningful to the user.	A financial dashboard shows data from multiple sources, but the user is unsure if it is accurate. The app should provide a ready-to-use interface for the user to use the data.	Minor issues	"Energy dashboard" is a good name for the app, but the user is unsure if it is accurate. The app should provide a ready-to-use interface for the user to use the data.	Surface trends, insights, and context advice can be used to understand current usage and save costs. The app should provide a ready-to-use interface for the user to use the data.
Practice judicious redundancy	In order to be consistent, the information presented in the app should be consistent with the information presented in the app.	A financial dashboard shows data from multiple sources, but the user is unsure if it is accurate. The app should provide a ready-to-use interface for the user to use the data.	Severe issues	Thermalize "Your mode" doesn't show any info about what it does to the user.	"Your mode" shows message for positive reinforcement. "You saved 100 dollars last month!" "Earned 100 bucks this month!"

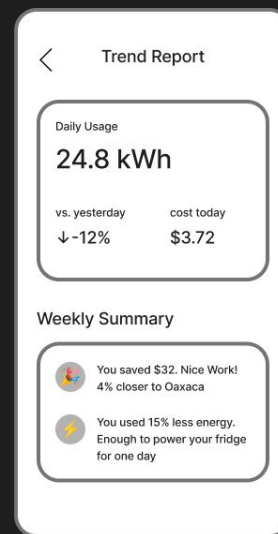

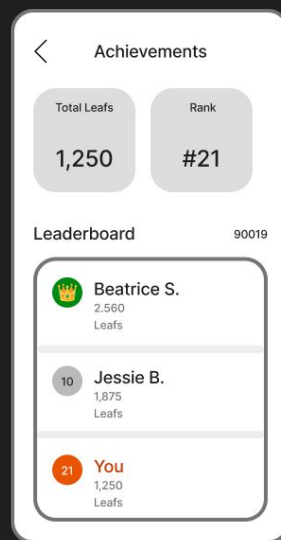

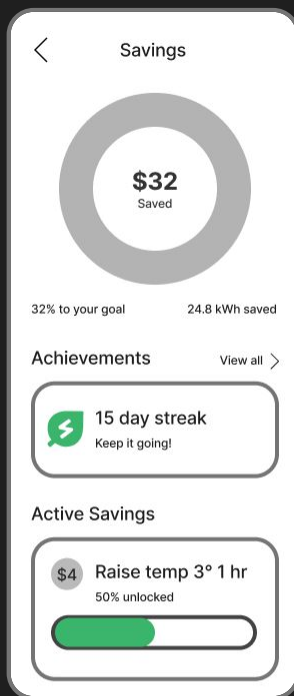

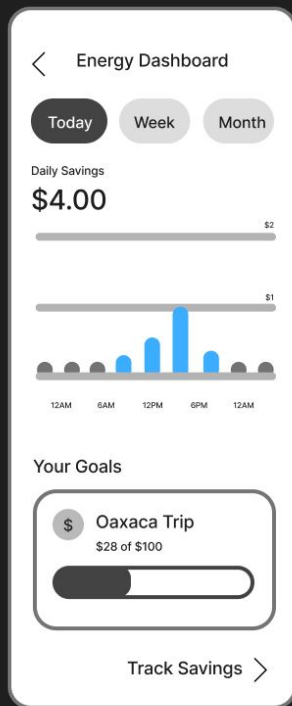

Issues

- Fuse Data
- Reduce Uncertainty
- Automate Unwanted Workload

Opportunities

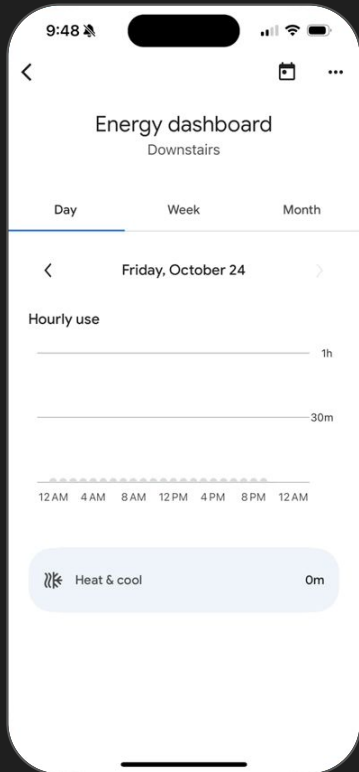

- Reduce Cognitive Load
- Aid Decision-Making
- Eliminate Mental Processing for core tasks

DESIGNING NEW FEATURES

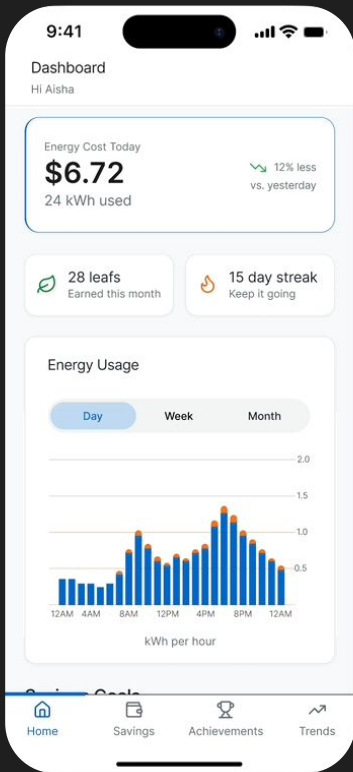

USER TESTING + POLISH

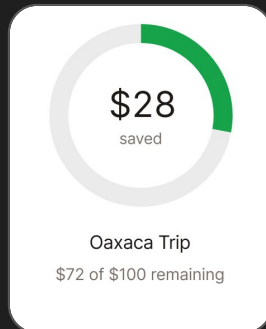

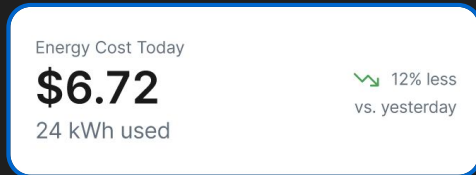

ORIGINAL

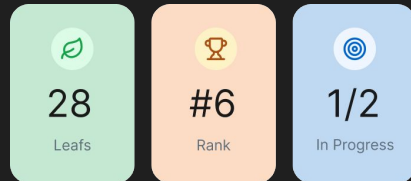

NEW

Cost and Savings highlighted clearly

Achievements & Milestones

Neighborhood Leaderboard

MEASURING SUCCESS

LEARNINGS + OPPORTUNITIES

Customization Adaptability

- Dark mode
- Responsive layouts

Usability Testing

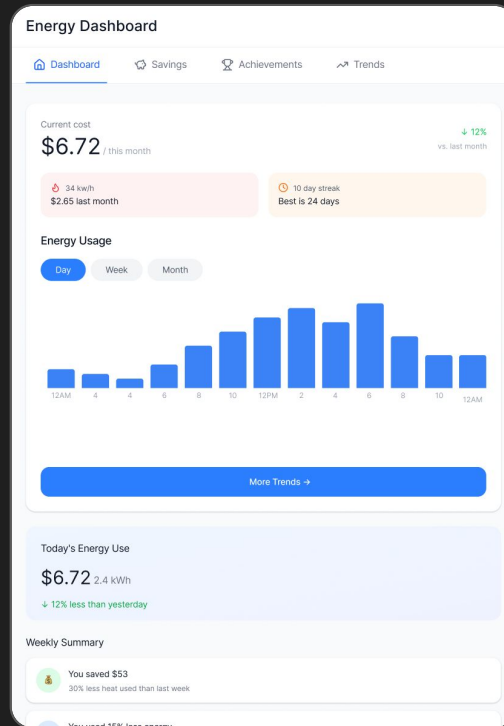

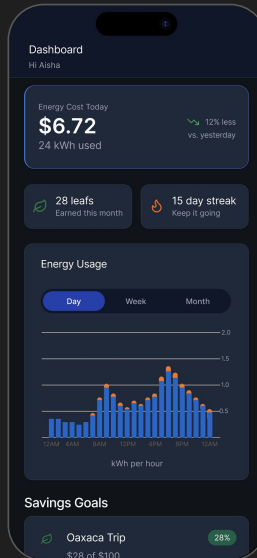

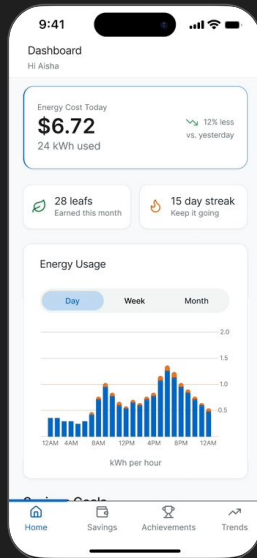

- 100% Core task completion
- Clear snapshot of cost vs. savings

Visual Appeal

"It feels good looking at it—the green makes me think I'm saving."

If I had more time

- More feedback on Savings Page
- Budget tracking integrations
- Tool Tips

Thank You

User Persona

PERSONA

User Persona

Aisha Rivera

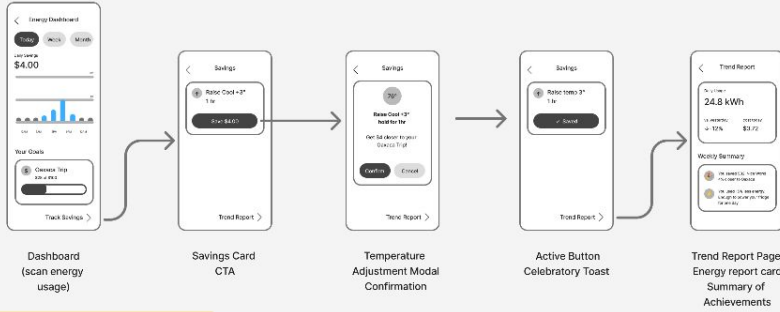

34, Nurse | Portland, Oregon | Goal-oriented smart home user

Wants to save up to \$100 over 3 months for her family trip to Oaxaca

Background	Motivations	Frustrations	Design Implications
Rents 2-bed duplex with partner and 7-year old son	Save up to \$100 in 3 months for a meaningful travel experience with her family	"Eco" feedback feels abstract, needs clear \$ and CO emission translation	Prioritize clarity in feedback: Show savings and context that reinforces transparency and trust
Works 12-hour shifts at Providence Health	Makes sustainable choices that are easy and don't sacrifice family comfort	Tired after work, forgets to check dashboard regularly	Keep Eco options and quick actions accessible through multiple entry points
Uses Nest Learning Thermostat along with other Google ecosystem of apps	Seeing tangible progress towards a "Trip Fund" will feel motivating as she works hard to save	Skeptical of overpromised savings claims	Integrate AI Energy coach for building habits with low-effort
Energy Use: Moderate, projected 5-10% annual savings potential		Dislikes unnecessary gamification	Personalize insights for comfort, cost, and carbon emissions in a calm, trusting tone

WIREFLOWS

Goal-Oriented

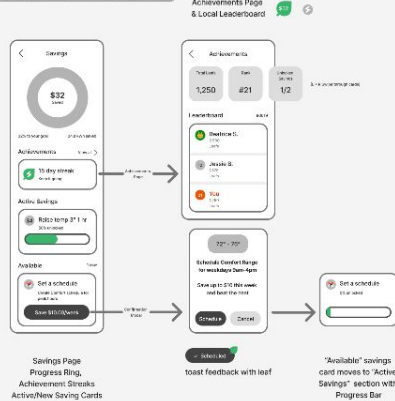

10/16 Notes

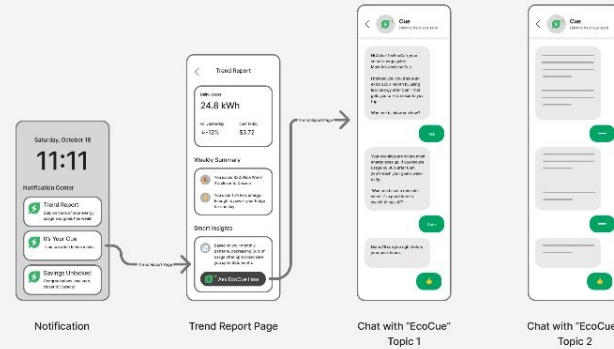

- Strong concept overall
- Moving into Savings archetype (vs Earnings Archetype), which is relevant in today's economy for the average family.
- Can see how to get the family involved to gamify this idea:
 - "Save for a trip to Disneyland" HUGE motivator for kids to save
- Prototype and layer the micro-interactions to increase engagement and motivational layers
- Test what works/doesn't in Usability Testing phase

Christina Lee

Eco Gamification + Reward System

"Smart" Saving Trends + Notifications

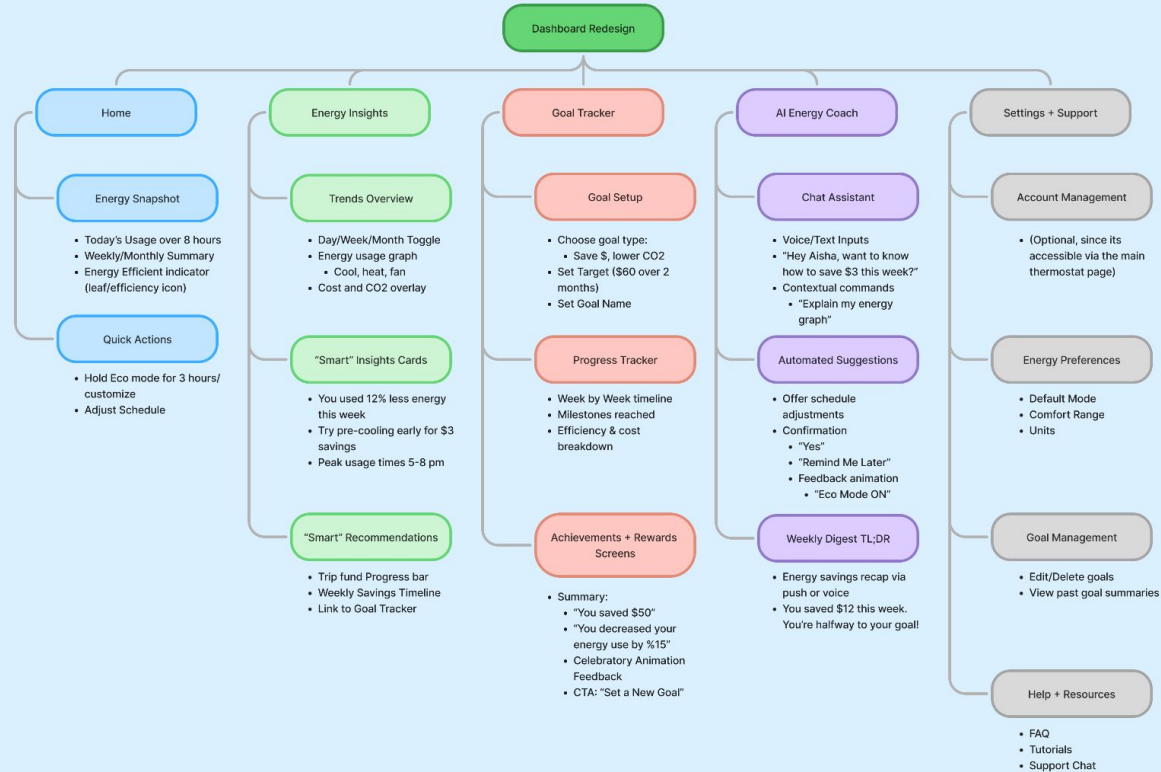

10/23 Notes

- Interesting to see how this translates into the Service aspect
- Is the juice worth the squeeze?
- Vincent: are there other ways to incorporate Aisha's budget-tracking tools if she has any?
- Google Sheets, notion, another app?

Christina Lee
